

How to Create Viral AI Fusion Videos (Step-by-Step Guide)

By Tech with Nandini

Step 1: Generate Fusion Images Using AI

You can use **ChatGPT-4o (Paid)** or **Leonardo AI (Free)** for this part.
Copy and paste these prompts below into the platform of your choice.

Prompt 1: Giraffe as a Carrot

A whimsical 3D illustration of a giraffe's body composed entirely of a giant orange carrot, with intricate textures and shading to resemble the vegetable's skin, standing upright on a white background, its long neck and legs curled up in a playful manner, featuring large, expressive brown eyes with thick eyelashes and a sweet, gentle smile, a few green carrot tops sprouting from its head like hair, and a subtle, warm glow emanating from its body to evoke a sense of friendliness and wonder.

Prompt 2: Elephant as an Orange

A realistic 3D image depicting a whimsical scene where an elephant's body is cleverly shaped like a vibrant orange, with its skin featuring the characteristic texture and segments of an orange peel, standing majestically in a lush, emerald green field with tall blades of grass swaying gently in the breeze, the bright orange hue of the elephant popping against the serene, natural backdrop, with warm sunlight casting a soft, golden glow over the entire scene, highlighting the intricate details of the elephant's features, such as its expressive eyes, delicate ears, and curved tusks.

Prompt 3: Snail as a Watermelon

A highly detailed, vibrant 3D image of a snail with a watermelon-shaped shell, resting in a lush green field filled with tall, swaying grass blades and a few scattered wildflowers, under a bright blue sky with a few puffy white clouds, the snail's shell

featuring a subtle texture and slight sheen, with gentle, realistic shading and highlights, its slimy trail visible on the ground, the overall atmosphere serene and peaceful, with a sense of summer warmth and tranquility.

Prompt 4: Owl as a Dragonfruit

A vibrant, stylized 3D illustration of an owl's head, meticulously crafted to resemble a dragonfruit, with the plumage transformed into intricate, scaly textures and vibrant pink hues, blending seamlessly with the fruit's green skin, complete with delicate, curly tendrils and a few stray leaves, set against a soft, creamy white background, with the owl's wise, round eyes gleaming with curiosity, its beak subtly curved into a knowing smile, as if holding a secret, and its ears, now resembling tiny dragonfruit seeds, perked up and alert, inviting the viewer to step into this whimsical, fantastical realm.

Step 2: Turn Your Images into Motion Videos

Now that you've created your images, head to:

 <https://hailuoai.video/create>

This tool turns your static AI images into engaging short videos using natural animation.

Use simple prompts like:

- "Add some movement in the picture"
- "Elephant moving trunk"
- "Owl blinking eyes"
- "Snail slowly crawling forward"
- "Giraffe swaying neck playfully"

The AI will animate the characters in a magical, lifelike way!

Step 3: Post it & Go Viral!

- Use trending audio (playful, dreamy, magical)
 - Add your CTA (e.g., "Want the tool? Comment FUSION!")
 - Tag @tech_with_nandini and I will reshare your story
 - Use hashtags like **#TechWithNandini #AIFusion #ViralAI**
-

BONUS: Customize for Any Niche!

This technique isn't just for animals and fruits — you can **customize it for literally anything!**

-  **Car Brands:** Ferrari as a tiger, Tesla as a lightning bolt
-  **Robots & Tech:** Create fusion robots made of smartphones or gadgets
-  **Fashion & Beauty:** Shoe made of flowers, lipstick as a fruit
-  **Fantasy Worlds:** Merge dragons with skyscrapers or unicorns with desserts

Whether you're a content creator, educator, or brand — this fusion technique is a **GOLDMINE** for engagement and storytelling.
